

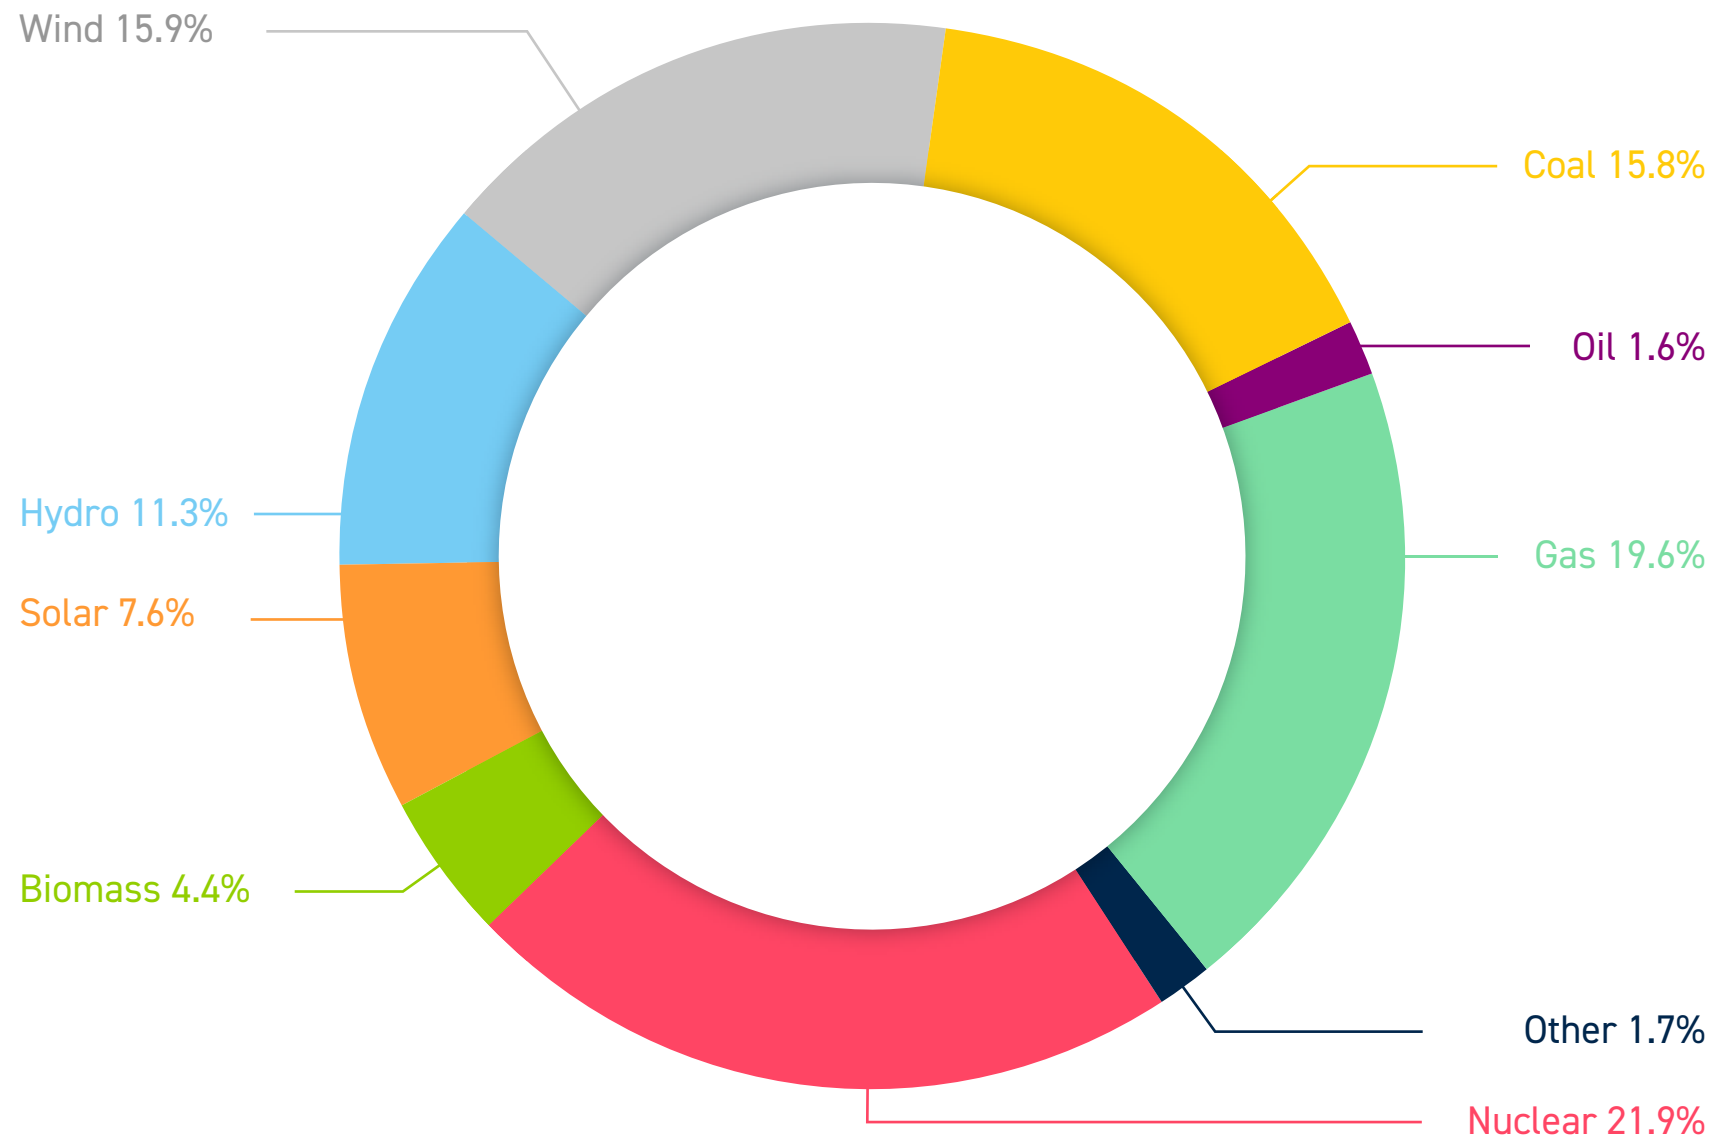

FIG.16

NET ELECTRICITY GENERATION IN THE EU BY FUEL TYPE (2022)

Source: Eurostat

In 2022, the EU produced 2 641 TWh (terawatt-hours) of electricity. Almost 40% of this came from renewable sources. Fossil fuels made up 38.6% and nuclear electricity over 20%. Gas was the main fossil fuel used to generate electricity (19.6%), followed by coal (15.8%).
