

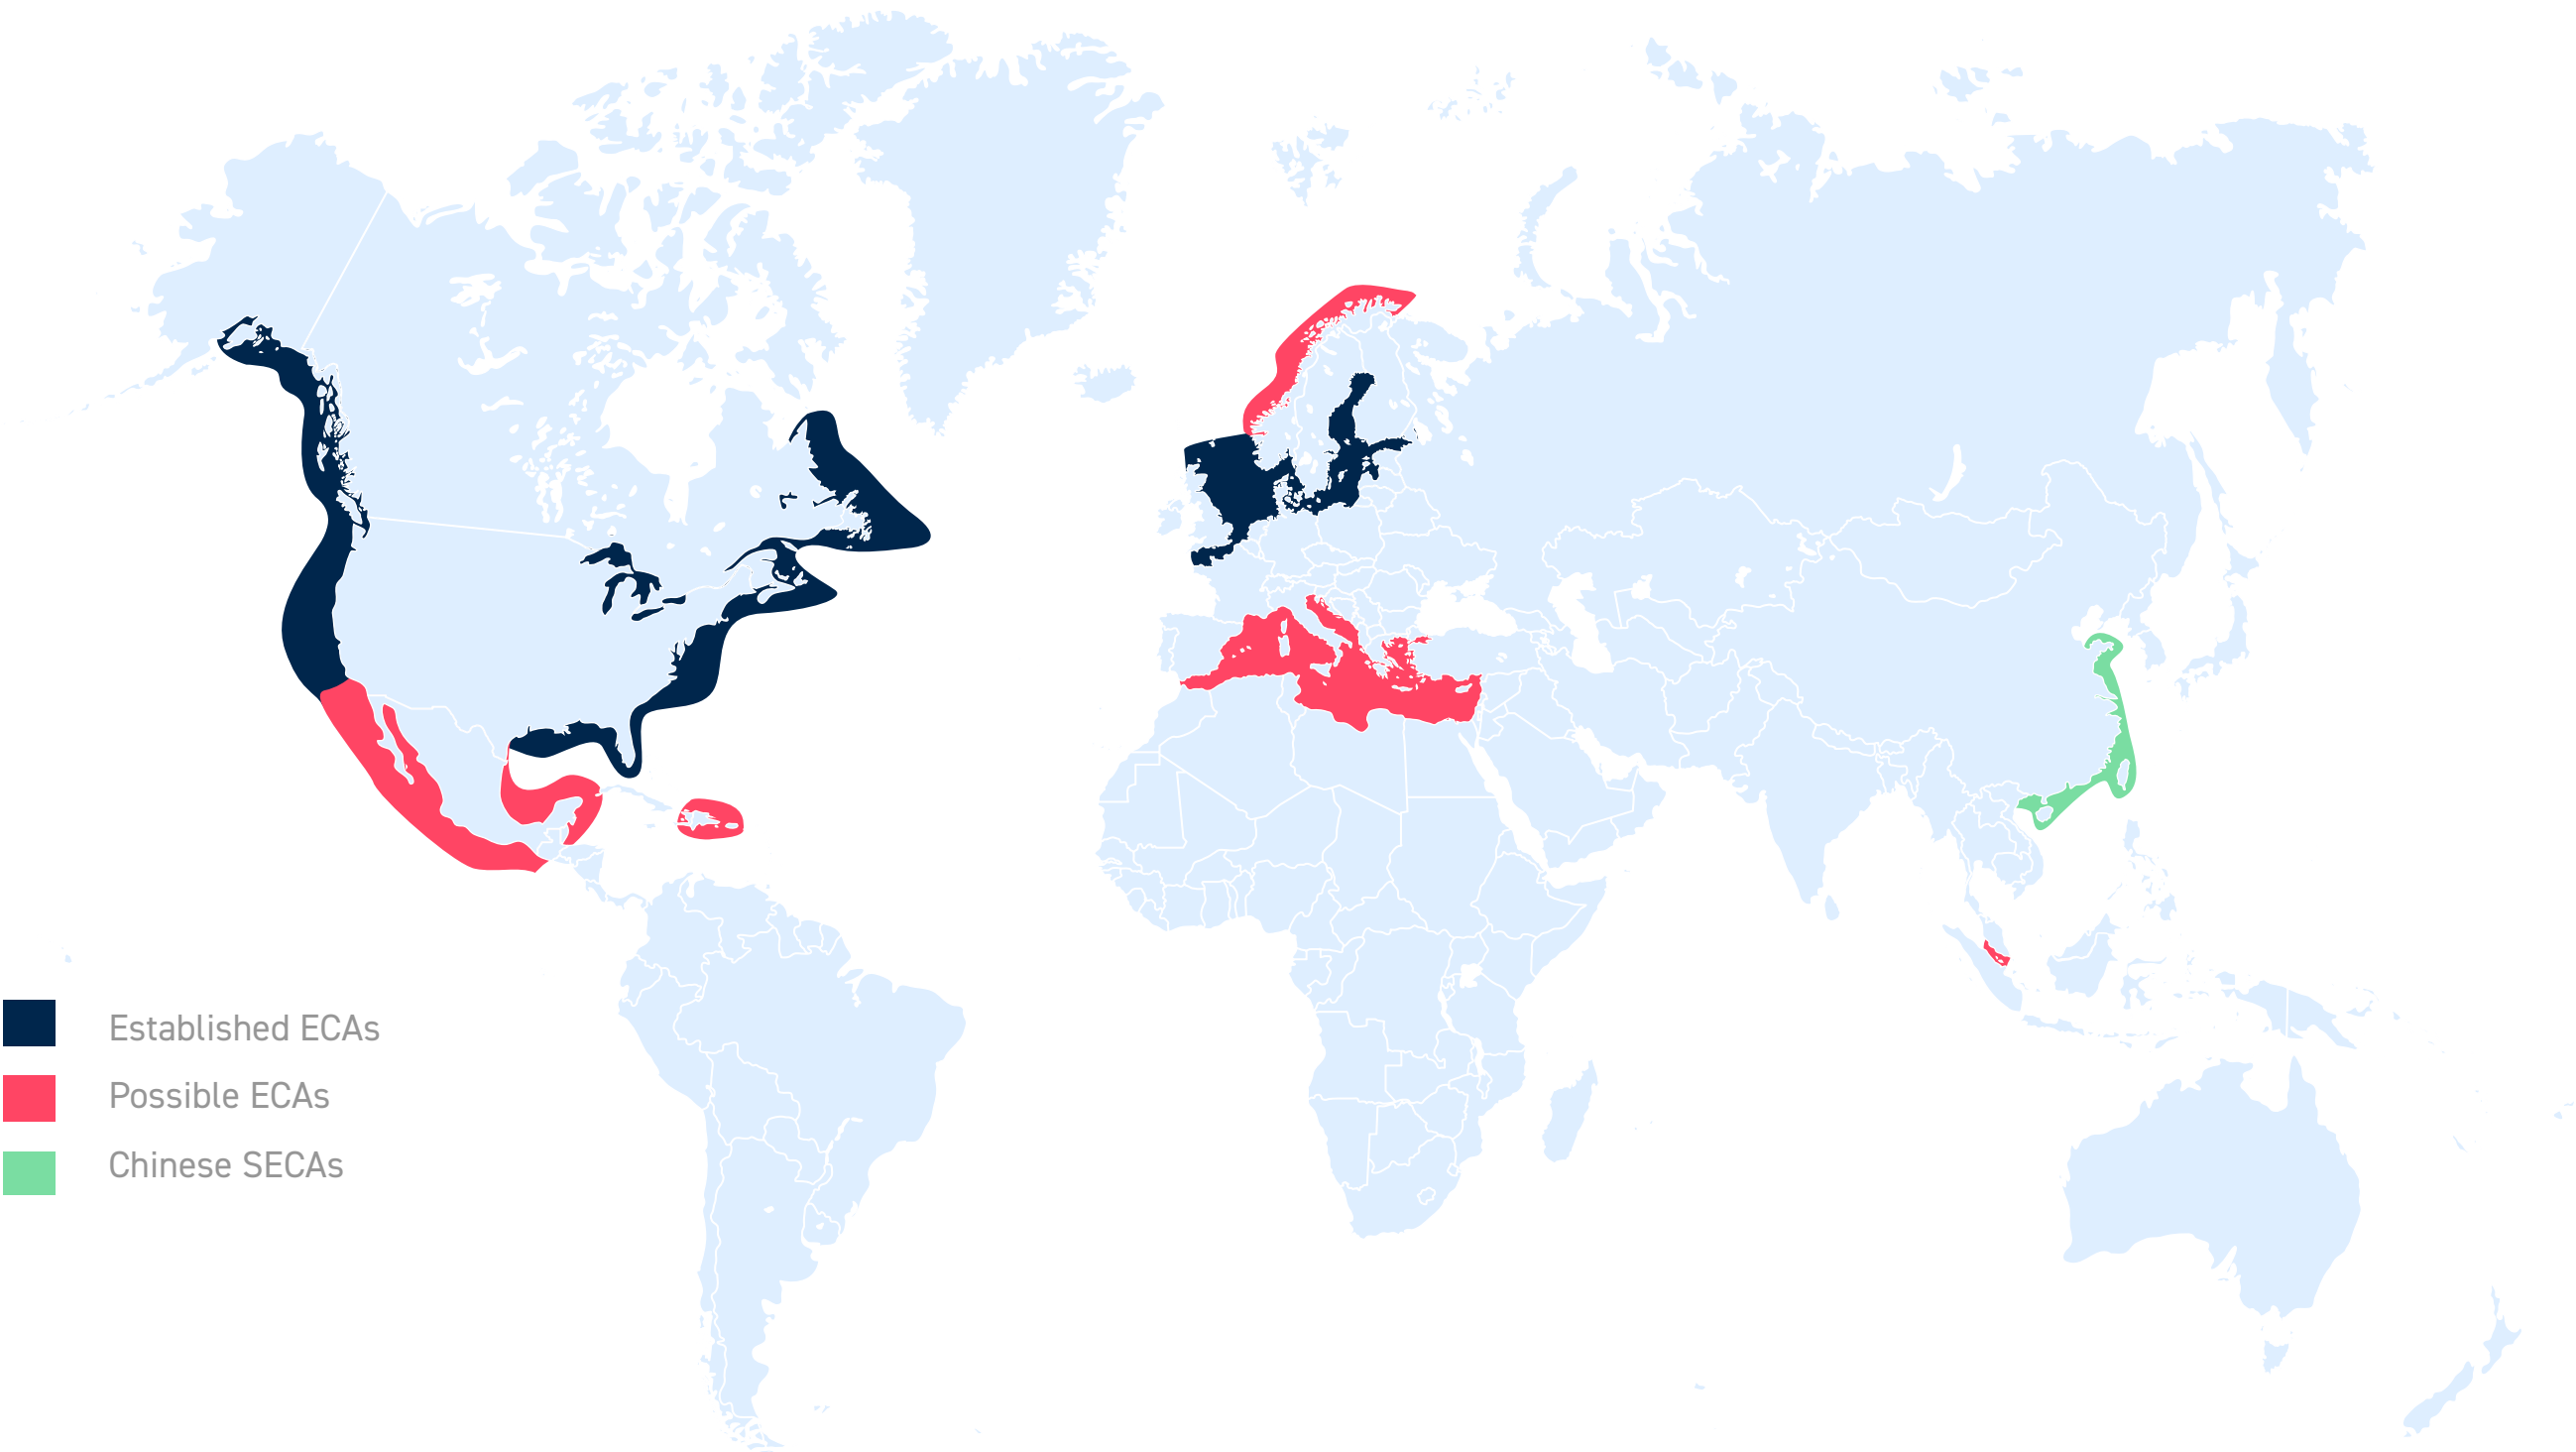

FIG.39

MARINE FUEL SULPHUR SPECIFICATIONS

SO₂ EMISSIONS CONTROL AREAS (SECAs)

Source: International Maritime Organization and Concawe

From January 2020, under the new sulphur limit, ships started to use fuel oil on board with a sulphur content of no more than 0.50% m/m, against the previous limit of 3.50%, which had been in effect since 1 January 2012. The interpretation of “fuel oil used on board” includes use in main and auxiliary engines and boilers.
